

Executive Report — Advanced Social Media Marketing Performance Analysis

Project Title

Multi-Channel Social Media Marketing Optimization: Improving Conversion Efficiency While Maximizing ROAS

Problem Statement

The business is experiencing **inconsistent marketing profitability across campaign types and channels**, where increases in traffic and engagement do not consistently translate into stronger conversion performance or improved ROAS. Leadership needs a data-driven strategy to optimize campaign allocation, reduce inefficient spend, and improve customer acquisition profitability.

1. Executive Summary

Analysis of **20,000 campaign records** across multiple marketing channels identified significant performance differences between campaign strategies, customer segments, and acquisition channels.

Key Findings:

- **Conversion (7.56 ROAS) and Retargeting (6.16 ROAS)** campaigns significantly outperform upper-funnel campaigns.
 - Over **1.2B impressions generated**, but funnel efficiency declines sharply into conversions.
 - **Engagement shows almost no correlation to conversions** (*correlation = 0.002*), proving that high engagement does not necessarily drive sales.
 - **High Value customers generate 4.62x CLV-to-CAC ratio**, making them the most profitable segment.
 - **TikTok delivers strongest ROAS (5.47)** among all channels, while **LinkedIn underperforms (1.87 ROAS)**.
-

2. Chart Analysis & Business Insights

Chart 1 — Campaign Type vs ROAS

Results

- **Conversion:** 7.56 ROAS
- **Retargeting:** 6.16 ROAS
- **Traffic:** 2.47 ROAS
- **Engagement:** 1.98 ROAS
- **Awareness:** 1.35 ROAS

Insight

Lower-funnel campaigns (Conversion & Retargeting) are generating **3–5x higher returns** than Awareness and Engagement campaigns.

This indicates that the business is likely **overinvesting in top-of-funnel campaigns with weak short-term profitability**.

Recommendation

Reallocate **20–30% of Awareness and Engagement budget** into Conversion and Retargeting campaigns.

Expected Business Impact

- **+25–40% increase in blended ROAS**
- **15–20% reduction in wasted spend**
- Faster revenue generation from existing audiences

Risk if Not Implemented

Continued overspending on low-performing campaigns may suppress profitability and increase CAC over time.

Chart 2 — Funnel Analysis (Impressions → Clicks → Engagement → Conversions)

Results

- **1.20B Impressions**
- **44.7M Clicks**
- **47.1M Engagements**
- **158.9K Conversions**

Insight

The marketing engine is highly effective at generating visibility and engagement but experiences **major drop-off at conversion stage**, indicating poor funnel efficiency.

This suggests:

- Weak landing page optimization
- Ineffective call-to-actions
- Poor retargeting strategy

Recommendation

Implement:

- Retargeting automation
- Landing page A/B testing
- Simplified conversion journey

Expected Business Impact

- **+10–20% conversion rate improvement**
- **15–25% CAC reduction**
- Higher monetization of existing traffic

Risk if Not Implemented

High acquisition spend will continue producing traffic without proportional revenue growth.

Chart 3 — Customer Segment vs CLV-to-CAC Ratio

Results

Segment CLV:CAC Ratio

High Value 4.62x

Gen X 3.82x

Millennials 2.95x

Gen Z 2.29x

Low Value 1.52x

Insight

High Value customers are significantly more profitable, generating over **4.6x return on acquisition cost**, while Low Value customers barely recover acquisition investment.

Recommendation

Increase targeting budget toward:

- High Value
- Gen X
- Millennials

Reduce acquisition focus on Low Value segments.

Expected Business Impact

- **20–35% increase in marketing efficiency**
- Higher long-term revenue per customer
- Better customer profitability

Risk if Not Implemented

Budget inefficiency and rising CAC due to overspending on low-value segments.

Chart 4 — Engagement vs Conversion Relationship

Results

Correlation = 0.002

Insight

There is **virtually no relationship between engagement and conversions**.

This means:

High likes, comments, and shares are **not translating into sales**.

The company is potentially prioritizing **vanity metrics over business outcomes**.

Recommendation

Shift campaign optimization toward:

- Conversion rate
- ROAS
- CAC efficiency

Instead of:

- Likes
- Comments
- Shares

Expected Business Impact

- Better ROI visibility
- Improved ad efficiency
- More profitable campaign optimization

Risk if Not Implemented

Marketing teams may continue optimizing for engagement while revenue stagnates.

Chart 5 — Channel Performance (ROAS & Conversions)

Results

Channel ROAS

TikTok	5.47
YouTube	4.93
Meta	4.05
Instagram	3.21
LinkedIn	1.87

Insight

TikTok and YouTube outperform all channels in profitability, while LinkedIn produces weak financial returns.

Recommendation

Reallocate **15–25% of LinkedIn budget** toward TikTok and YouTube.

Expected Business Impact

- **+20–30% improvement in overall ROAS**
- Increased conversion efficiency
- Lower acquisition costs

Risk if Not Implemented

Continued inefficient spending on low-performing acquisition channels.

Chart 6 — Revenue Over Time

Insight

Revenue volatility suggests inconsistent campaign optimization and potentially ineffective spend allocation across periods.

Recommendation

Introduce:

- Monthly ROAS monitoring
- Budget optimization model
- Campaign performance forecasting

Expected Business Impact

- More predictable revenue growth
- Better spend efficiency
- Reduced revenue volatility

Risk if Not Implemented

Revenue instability may continue, limiting growth scalability.

Final Strategic Recommendation

The strongest growth opportunity lies in:

✓ Scaling Conversion + Retargeting campaigns

✓ **Prioritizing High-Value customer segments**

✓ **Reducing spend on Awareness & LinkedIn campaigns**

✓ **Optimizing conversion funnel instead of engagement metrics**

Estimated Business Impact if Fully Implemented

- 📈 **ROAS improvement: +30–45%**
- 📉 **CAC reduction: 15–25%**
- 💰 **Revenue uplift: +20–35%**
- 🎯 **Conversion improvement: +10–20%**

Conclusion

The analysis shows the business can substantially improve profitability by shifting from **engagement-focused marketing to conversion-focused optimization**, prioritizing high-value customer acquisition and reallocating spend toward high-performing campaign types and channels.
